

Decentralized Project On DoraCakeSwap

DISCLAIMER :

The information shared in this whitepaper is not all-encompassing or comprehensive and does not in any way intend to create or put into implicit effect any elements of a contractual relationship. The primary purpose of this whitepaper is to provide potential token holders with pertinent information in order for them to thoroughly analyse the project and make an informed decision. Prior to your participation in the purchase of DORACAKE Token, we strongly advocate a careful study of this whitepaper all the documents associated with the same, including the contract in relation to the purchase of the same.

You may even engage the services of appropriate experts to help you with investment analysis. Certain statements, estimates and financial information featured in this whitepaper are forward-looking statements that are based on and take into consideration certain known and unknown contingencies and risks which in eventuality may cause the estimated results or may differ factually and substantially from the featured estimates or results extrapolated or expressed in such forward-looking statements herewith

INTRODUCTION:

Doracakeswap is going to develop decentralized exchange on Binance Smart Chain, with the highest trading volumes in the market.

Why pay more? Doracakeswap runs on Binance Smart Chain, a blockchain with much lower transaction costs than Ethereum or Bitcoin. Trading fees are lower than other top decentralized exchanges too, so that's a double win for you!

Trade directly from your wallet app. Unlike centralized exchanges like Binance or Coinbase, Doracakeswap doesn't hold your funds when you trade: **you have 100% ownership of your own crypto.**

WHY BINANCE SMART CHAIN?

Binance Smart Chain is live on mainnet, activating the parallel blockchain to Binance Chain that will enable the creation of smart contracts and the staking mechanism for BNB. Any interested individuals and/or organizations can gather BNB stakes to become a validator of this new blockchain.

Five months since it was first unveiled in April 2020, the Binance Chain community has activated the Binance Smart Chain (BSC). Created to run parallel to Binance Chain, BSC enables the creation of smart contracts for tokens on the Binance-branded blockchain. It also introduces an all-new staking mechanism for BNB, one of the world's top cryptocurrencies.

The launch of BSC, an Ethereum Virtual Machine-compatible blockchain that is ready to be tested and piloted by some of the top projects in the crypto industry, is expected to greatly increase the utility of both Binance Chain and BNB. With the introduction of the Proof of Staked Authority (PoSA) consensus mechanism, BSC creates an ecosystem where validators, token holders, developers, and users all benefit from a rewarding blockchain that offers high performance and ample space for further innovations.

DECENTRALISED SWAP

The launch of BSC, an Ethereum Virtual Machine-compatible blockchain that is ready to be tested and piloted by some of the top projects in the crypto industry, is expected to greatly increase the utility of both Binance Chain and BNB. With the introduction of the Proof of Staked Authority (PoSA) consensus mechanism, BSC creates an ecosystem where validators, token holders, developers, and users all benefit from a rewarding blockchain that offers high performance and ample space for further innovations

BLOCK CHAIN TECHNOLOGY:

Decentralization is not a new concept. When building a technology solution, three primary network architectures are typically considered: centralized, distributed, and decentralized. While blockchain technologies often make use of decentralized networks, a blockchain application itself cannot be categorized simply as being decentralized or not. Rather, decentralization is a sliding scale and should be applied to all aspects of a blockchain application. By decentralizing the management of and access to resources in an application, greater and fairer service can be achieved. Decentralization typically has some trade-offs such as lower transaction throughput, but ideally, the trade-off are worth the improved stability and service levels they produce.

TRADING:

Doracakeswap is a BSC-based decentralized trading protocol for automated liquidity provision and an open financial market accessible to all. Doracakeswap supports secure and immediate exchange between any BEP20 tokens. Market makers will get service fees continuously without the platform taking any commission.

TOKEN ALLOCATION

Burn : 10 Million

Amount : 20 Million

Duration : Till September

Get from website : <https://doracakeswap.com/about.html>

Locked Token : <https://dxsale.app/app/pages/dxlocktokencreate>

ROADMAP

Listing on: Coin
market cap & Coingecko
Date: 20 June 2021

Own swap (ArecaSwap)
Date: Coming Soon

Listing on pancakaswap
Date: 15 June 2021

AIRDROP:-End Date:- 20 July 2021
Distribution Date: 15 June 2021

Own Exchange
Date: Coming Soon
